Kitten Packages

The Sacramento Cat Hospital is proud to offer vaccination packages for kittens under the age of six months. You can be assured that your kitten is receiving the highest quality of preventative care available and save money at the same time.

Vaccine Package A - For Indoor & Outdoor Cats Includes:

- 2 Distemper/Upper Respiratory Vaccinations (FVRCP IN) at 8 & 12 weeks
- 1 Rabies Vaccination (PureVax) at 16 weeks
- 1 Feline Leukemia & Feline Aids Virus Test at 16 weeks
- 2 Feline Lukemia Vaccinations (PureVax) at 16 & 20 weeks
- 2 Drontal Tablets (to treat for Internal Parasites)
- 1 Fecal Examination (to check for internal parasites)
- 3 Physical Examinations by the Veterinarian at the Vaccine Appointment

Vaccine Package B - For Indoor Cats Includes:

- 2 Distemper/Upper Respiratory Vaccinations (FVRCP IN)at 8 & 12 weeks
- 1 Rabies Vaccination (PureVax)at 16 weeks
- 1 Feline Leukemia & Feline Aids Virus Test at 16 weeks
- 2 Drontal (to check for internal parasites)
- 1 Fecal Examination (to check for internal parasites)
- 2 Physical Examinations By a Veterinarian at the Vaccine Appointment

We also have available Feline Immunodeficiency Virus (FIV) vaccine or Feline Infectious Peritonitis (FIP) vaccine for cats in high risk environments. We recommend Heartgard, a monthly heartworm preventative and Advantage or Frontline for monthly flea control to all cats. We also recommend microchipping both indoor and outdoor cats to help get them home in the event they get lost. The microchip can be placed during your kitten's physical examination, or under anesthesia during their spay or alter surgery. We recommend spaying or neutering your kitten at around 6 months of age. You can prepay for these procedures for additional savings.
