## Anesthesia/Surgery Consent Form

Date: \_\_\_\_\_  
Client: \_\_\_\_\_ Patient: \_\_\_\_\_  
Species: \_\_\_\_\_  
Breed: \_\_\_\_\_  
Sex: \_\_\_\_\_  
Color/Markings: \_\_\_\_\_  
Birth Date: \_\_\_\_\_

Your pet will be undergoing general anesthesia plus a surgical procedure today. Please understand that all precautions will be taken to prevent complications against injury, escape or death. However, anytime anesthesia is used there is a risk of an adverse reaction. As the owner, you will assume all risks and not hold the Sacramento Cat Hospital responsible or liable in any manner.

In order to recognize any underlying abnormalities your pet may have, we recommend having a pre-surgical blood profile run on your pet. If your pet is less than six years of age, we recommend an in-house blood profile. This consists of a blood glucose, BUN, PCV, and TP. If your pet is six years of age or older, we recommend a CBC, chemistry, and urinalysis which will check blood cell counts, T4, blood glucose, kidney function, and liver enzymes. These blood tests will help us assess the health status of your pet more completely and determine if there are any additional precautions we need to take before surgery no matter the age of your pet. We require a blood profile and urinalysis for animals six years of age or older if one has not been performed within two weeks of the date of anesthesia. There is an additional fee for these blood tests.

I would like an in-house mini panel (blood glucose, BUN, PCV, TP with results today)  
 I would like CBC, chemistry panel and urinalysis (must be sent to outside lab and will take 24 hours for results)  
 I am declining labwork at this time
